DBD-16L

MINI REBAR BENDER

HANDLING INSTRUCTIONS

READ THESE INSTRUCTIONS CAREFULLY PRIOR TO USING  
AND SAVE THEM FOR FUTURE REFERENCE

## DIAMOND

### SPECIFICATIONS

BENDING SPEED	: 1.5 SEC./180° BENDING
BENDING ANGLE	: ANY ANGLE UPTO 180° (0°-180°)
BENDING CAPACITY	: 8MM $\phi$ -16MM $\phi$
MAX. Q'TY CAN BE BENT AT ONE TIME	: 10MM $\phi$ (7/16")... 3 PCS 13MM $\phi$ (9/16")... 2 PCS 16MM $\phi$ (11/16")... 1 PC
POWER SUPPLY	: ELECTRIC MOTOR/SINGLE PHASE
OUTPUT	: 5A:220V / 9.4A:115V
WEIGHT (WITHOUT BENDING TABLE)	: 19 KG (42 LBS)
DIMENSIONS (WITHOUT BENDING TABLE)	: 329 × 350 × 245MM

### PART NAME

- |                       |                           |
|-----------------------|---------------------------|
| 1. BENDING ROLLER     | 6. OPERATION BUTTON       |
| 2. CENTER ROLLER      | 7. ANGLE SETTER           |
| 3. ADJUSTABLE STOPPER | 8. ANGLE STOPPER          |
| 4. MAIN SWITCH        | 9. SOCKET FOR FOOT SWITCH |
| 5. POWER CORD         |                           |

## DIAMOND

---

### SAFETY PRECAUTIONS

**▲ WARNING ▲** : When using electric tools, basic safety precautions should always be followed to reduce risk of electric shock and personal injury including the following items:

1. Keep hands away from all moving parts and rollers.
2. When positioning the bar between rollers, make sure that it lies flat on machine surface. If the bar is off surface, the action of rollers may cause it to fly out.
3. Do not exceed the maximum number of bars that can be bent at one time. Refer to the table of page No.3.
4. Wear safety goggles and gloves while the bender is operated.
5. Wear proper apparell. No loose clothing or Jewerly to get caught in moving parts. Wear sturdy boots with non-skid soles. Steel-toed boots are recommended.
6. Don't expose tool to rain or use in damp or wet locations. Do not use tool in presence of flammable liquids or gases. Keep work area well lit. If the tool is used outdoors, keep it covered when not in use and protect it from rain or water.
7. Minors should never be allowed to use a Rebar Bender, especially children should not be allowed in the area where Rebar Bender is used.
8. Do not try to bend materials harder than 80,000psi as they will either crack and fly out or cause machine failure.
9. Disconnect tool from receptacle when not in use, changing rollers and before servicing.
10. Tool must be grounded while in use to protect from electric shock. The tool should be plugged into a three-hole electrical receptacle. If an adaptor is used to accomodate a two-hole

## **DIAMOND**

---

receptacle, the grounded ear must be attached to a known ground. Never remove the third prong.

11. Keep tool clean at all times for best and safest performance. Keep hands dry and free of oil or grease. Inspect switches, tool cords periodically and have them repaired or replaced by an authorized facility if damaged. Check all moving parts for alignment and binding as well as for breakage and improper mounting. Damaged parts should be repaired or replaced by an authorized service facility.

### SPECIAL INSTRUCTION FOR REBAR BENDER

1. Tool will only operate on the voltage for which it is designed (with a tolerance of  $\pm 10\%$ ). Exceeding the voltage will cause the motor to burn out, while an insufficient voltage will result in clutch slip, eventually seriously damaging the tool.
2. Magnetic clutch has been pre-set and require no further adjustment. Of the dry type, it should be safe-guarded from liquids, especially oil and grease, which will cause clutch-slip.
3. When the moving roller is changed, oil its moving part.
4. As the distance from the supply outlet increase, heavier gauge extension cords are required. The use of extension cords of inadequate size wire causes a seriously drop in voltage, loss of power and possible motor damage.
5. After the operation, be sure to remove by wiping metal dust adhering the tool body.

# DIAMOND

## HANDLING INSTRUCTIONS

1. Adjust the main body to the desired height. Use optional stand set if it is necessary.
2. Plug the power cord in.
3. Select and set the correct rollers for the bars to be bent. See the following table.

TABLE FOR COMBINATIONS OF CENTER ROLLER AND BENDING ROLLER  
ACCORDING TO BAR SIZE.

Diameter of Rebar	Center Roller			Bending Roller			Max. Bent at one time
	Mark	Diameter(mm)	Parts #.	Mark	Diameter(mm)	Parts #.	
10mm	(10)	30	1BDL400322	10	70	1BDL400361	3 pieces
10mm	10 (13)	38	1BDL400332	10	70	1BDL400361	3 pieces
13mm(12mm)	10 (13)	38	1BDL400332	13	52	1BDL400371	2 pieces
13mm(12mm)	13 (16)	50	1BDL400342	13	52	1BDL400371	2 pieces
16mm	16	62	1BDL400352	16	34	1BDL400381	1 pieces

\*Bending rollers have dust seal & bearings/bush

4. Lay the bar on the machine surface between the center roller and bending roller and adjust the stopper so that the bars is parallel to the front edge of the machine.

## DIAMOND

---

5. Tighten the clamp lever to lock the stopper. The clamp lever will rotate freely so that it may set to the desired angle.

Pull the clamp lever upwards and rotate it to the desired position, and push it back to lock.

6. Turn the switch on.

7. Set the angle setter to the desired angle. First make a test bend and if the angle of the bend is not exact, adjust the angle setter slightly to the right or left to obtain correct angle.

## DIAMOND

8. Push the operation button.  
The moving roller will automatically return to the start position once the bend has been completed.

**!WARNING!**

NEVER TOUCH ALL MOVING PARTS AND ROLLERS WHILE THE REBAR BENDER IS BEING OPERATED.

\*Two bending angles can be pre-set.

- 1) Set the angle setter at  $90^\circ$  and tighten the left wing bolt to lock the left angle stopper.

Example:

- 3) Set the angle setter at the position of  $135^\circ$  and push operation button.  
4) After the  $135^\circ$  bending has been completed, slide the rebar by desired length and set the angle setter to the  $90^\circ$  bending position.  
5) Push the operation button to make  $90^\circ$  bending.

\*IF IT IS NECESSARY TO STOP THE MACHINE IN AN EMERGENCY, TURN OFF THE MAIN SWITCH. THE MOVING ROLLER WILL RETURN TO THE START POSITION IMMEDIATELY.

## **DIAMOND**

---

### **INSPECTION & MAINTENANCE**

#### **! WARNING !**

Always unplug tool before performing any maintenance. The use of any parts of necessary other than DIAMOND genuine may be hazardous.

1. In order to empty the metal dust, tilt the machine body 45° to the left.
2. At least once per two months, remove the front cover and blow the metal dust with compressed air from inside machine. At the same time, apply grease to the gear.
3. At least once a month, check the carbon brushes for wear or damage. And replace if necessary.
4. If the machine should fail to start when the operation button is pressed, please check whether:-
  - i) the machine is plugged in
  - ii) the main switch is on
  - iii) the carbon brushes have no problemIf there are no faults on the above, please ask to your supplier or directly to us.
5. Check that there are no loose on the visible nuts and bolts before start the operation.
6. If the machine is used outdoors, keep it covered when not in use and protect from rain or water.
